

SONY

Contactless IC Card Chip

FeliCa

RC-SA01

RC-SA01 contactless IC chip supports greatly-enhanced security with the adoption of Advanced Encryption Standard (AES).

* The image printed on this card is only a sample.

FEATURES

[Common]

- **Highest level of security for contactless smart-card chip**

RC-SA01 IC chip has enhanced security provided by AES encryption.

The product is the contactless IC card chip with embedded software which has acquired EAL6+ certification in accordance with Common Criteria (ISO/IEC 15408), the international standard for evaluation criteria in IT security.

- **Multi-application platform with higher performance and reliability**

Higher transaction speed is achieved for every type of card application, such as transportation ticket and e-payment. In addition, the IC chip achieves lower power consumption than the current FeliCa™ IC chip.

The new Error Checking and Correcting (ECC) functionality improves the reliability of non-volatile memory data.

- **Able to communicate with NFC Forum-compatible readers**

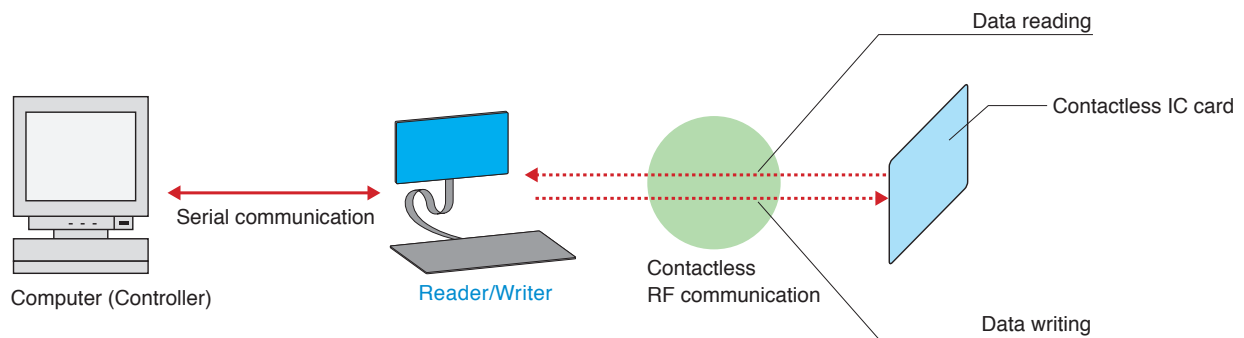

The chip complies with Type 3 Tag functionality defined by the NFC Forum. Therefore, the card with the chip can communicate with NFC-compatible smartphones and readers.

PRODUCT SPECIFICATIONS

		RC-SA01 AES IC chip
Communication method		Conforms to ISO/IEC 18092 (212 kbps or 424 kbps Passive Communication Mode)
Operating frequency		13.56 MHz
Communication speed		212 kbps and 424 kbps automatically switchable
Supported encryption		AES encryption
Supported commands		AES-encrypted commands Non-encrypted commands
Non-volatile memory	Size (Type)	4 Kbyte EEPROM
	User memory	160 blocks (1 block=16byte)
	Data retention period	50 years (25 °C), 10 years (85 °C)
	Write endurance	500,000 times (25 °C), 100,000 times (85 °C)
Storage temperature		-55 °C to +125 °C
Operating temperature		-25 °C to +100 °C (Quality and reliability are assured when the operating temperature is within the range of -25 °C to +85 °C.)
